

ELLIPSOIDAL SPOTLIGHTS

Ellipsoidal Spotlights project a hard edged beam. You can determine and adjust the specific shape of the light beam with the standard four-way push shutters, or with the optional pattern or iris.

Any theatre, TV studio, school auditorium, night club, museum...or even large display areas such as fashion show ramps or outdoor expositions will find the ellipsoidal spots ideal for lighting areas from distances of fifteen to one hundred feet. Ellipsoidals are exceptionally valuable where high-intensity, large area accent lighting is needed. These spots can be employed as overhead, side, back, or front lighting. A single housing can be equipped with various lenses to provide varying beam widths from one location.

All Major Controls' 3000 Series Ellipsoidal Spotlights are provided with a No. 280 'C' clamp, color frame, 4 internal framing shutters, 36" pigtail and connector. When ordering specify: lens; lamp socket; hanging device; feeder cord; plug; beam control (iris or template pattern options).

3200 SERIES
6" and 9" ELLIPSOIDAL

3300 SERIES
